

# Titanium Alloy TC4-SLM

## Description

Titanium is a versatile material widely used in medicine due to its bio-compatibility. Titanium 3D-printed parts can be made hollow and feature complex surface geometries, serving as connection points for bone and tissue growth. Additionally, its excellent strength-to-weight ratio and corrosion resistance make it a popular material in the aerospace industry.

## Features

Features: Preferred for industrial use, high strength, and lightweight

Key parameters:

| Maximum size   | Default layer height | Optional layer height | Tolerance | Heat resistance |
|----------------|----------------------|-----------------------|-----------|-----------------|
| 250*250*320 mm | 0.1 mm               | 0.5 mm                | 0.2%*L    | 50-60           |

Suitable for: functional prototypes and final products, form and fit inspection, functional prototyping and testing

Not suitable for: large models, internal cavities in designs (unless escape holes are used)
